# Code Academy Space Booking System

Code Academy space booking system allows the users/clients to check the available spaces and book them for workshops. The user will be able to view all the space with it's availability status and then he will be able to book the space

First we need to create the ERD and the schema Diagram to show the main entities of the system and the relation between them :

1. ERD

2. Schema Diagram

After drawing the diagram we will start with the implementation process by downloading the Entity Framework packages that we need them in order to configure and to connect with the database using code first approach.
